

Amendments to the Specification

Please amend paragraph 0040 as follows:

[0040] The antenna **154** may be coupled directed to a transponder circuit during manufacture analogous to that described above. Alternatively, the transponder assembly **152** may include a separate transponder circuit **158** with contacts **160** for coupling with contacts **162** disposed on the file **130'**, one of which ~~in~~ is connected to the antenna **154**. The file **130'** may include a recess **164** configured to receive the circuit **158** when coupled with the contacts **162**. According to the embodiment of the invention illustrated in FIG. 6, the file **130'** may be generically produced with the embedded antenna **154**. The end user may then acquire separate transponder circuits **158** configured to couple with the contacts **162**.
